### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Manning et al. (6,270,317).

Manning discloses a turbine nozzle (Figs. 1-3) comprising: a pair of hollow vanes 18 fixedly joined to outer and inner bands (Fig. 1), and each vane including opposite pressure and suction sides extending in span between the bands, and extending in chord between leading and trailing edges; the trailing edge of a first one of the vanes forms with the suction side a second one of the vanes forward of the trailing edge thereof a throat of minimum flow area between the vanes; each of the vanes further including identical patterns of outlet holes (Figs. 1, 2) distributed over the pressure and suction sides thereof for discharging cooling air therefrom collectively at a reference flowrate through each vane; the patterns of holes including multiple rows of showerhead holes 5-7 bridging the leading edge, and two rows of gill holes 1, 2 spaced aft from the showerhead holes along the suction sides of the vanes; a row of auxiliary holes 13 spaced aft from the showerhead holes through the pressure side in each vane; and the gill holes inherently being sized to counterbalance added discharge of the cooling air through the auxiliary holes for maintaining the reference flowrate (col. 6, line 63 - col. 7, line 4).

Art Unit: 3745

***Allowable Subject Matter***

3. Claims 2-10 and 12-20, due to the limitations of the showerhead holes and the auxiliary holes are substantially of the same size and the gill holes are larger, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Prior Art***

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 1 patent.

Noe et al. (6,554,563) is cited to show a turbine nozzle having different cooling hole configurations.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Ninh Nguyen whose telephone number is (571) 272-4823. The examiner can be normally reached on Monday-Friday from 7:30 A.M. to 5:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look, can be reached at (571) 272-4820. The fax number for this group is 703-872-9306.
